Woodridge, IL 60517

# STEM CELL THERAPY

*Repair Rebuild Rebalance*

*Onsite Closed System Sterile Lab*

## Don't Wait, Regenerate!

Regenerative medicine is a rapidly evolving field in healthcare.

Stem Cell Therapy, Platelet Rich Plasma (PRP) Therapy and Prolotherapy are three treatments that are typically considered regenerative medicine therapies.

Regenerative medicine has the potential to heal or replace tissues, ligaments, cartilage and bone, damaged by age, disease, or trauma.

## Using Your Own Cells to Establish Normal Function

If you have chronic pain from arthritis or a past injury, you might be a good candidate for stem cell therapy.

Stem cell therapy uses your own adult stem cells to facilitate healing and repair.

It has virtually no side effects, and you can return to daily activities immediately.

Stem cell therapy, combined with physical therapy can provide significant relief from pain without surgery, injections or drugs.
